Threshold-Corporation

Petaluma, CA | May 2005-June 2006

Summary

Using a strong knowledge of user interface design techniques, I developed a custom interface to control a Home Server remotely through any browser.

Developed in AS2, I took data from the server and developed the user interface to display, graph and control various devices.

The Threshold-Corporation Home Server is a home security gateway and access point. It has LAN, Wifi and low power wireless connectivity. It allows customized functions to be created for home security events. It also allows devices to be configured by Bluespot, a short range infrared configuration technology.

User Interface Design

- Designed custom Flash AS2 interface components to graph, display and stream video through a browser based control panel.
- Interfaced with many external devices using XML to retrieve data then using custom built components displayed the data in a easy to read user interface.
- Wrote custom classes and demonstrated strong programming techniques.

Web Design

- Designed and maintained the website threshold-corporation.com.
- Designed and built dynamic content for the website ONE-NET.com.
- Maintained and moderated the ONE-NET forum.

Other experience

- Graphic Design by **Michael Roddick** | Concord, California August 1998-Present.
- Skilled Labor **Brian Hunter** | Concord, California February 2005-2007.
- Steel Fabricator **Pat's Welding Service** | Concord, California May 1997-May 2001.
- Mechanic **A & S Muffler and Brake** | Concord California June 1991-May 1999.
